

CT-2020 STAR TRACKER

GO BEYOND WITH BALL.®

Leveraging its heritage in producing advanced star trackers, Ball Aerospace is developing the CT-2020, a low-cost, high performance, fully U.S.-sourced, commercial star tracker.

OVERVIEW

Under a grant from the Defense Production Act Title III, Ball is developing a new line of affordable, fully-domestic, commercial star trackers: CT-2020.

Domestically-sourced, secure solution

Utilizing all U.S. trusted suppliers, secure systems and flight software, the CT-2020 is compliant with the Buy American Act, providing an assured, fully U.S.-sourced solution for the nation's most important missions.

Low cost, high performance

Blending medium and high accuracy star tracker heritage in a compact, fully-integrated package, CT-2020 offers high performance and operational flexibility at a commercially-competitive price point.

CT-2020 integrates the latest high-efficiency Complementary Metal Oxide Semiconductor (CMOS) detector technology developed in the U.S. specifically for star trackers, enabling the CT-2020's cost-effective small mass and volume design.

Operational flexibility, on-orbit upgrades

Featuring operational flexibility, CT-2020 provides customers two modes of operation: fully autonomous attitude and directed search, in which the user can select certain regions of interest. In autonomous attitude mode, the tracker can achieve single head accuracies in the realm of 1 arcsec, with even higher accuracies in directed search mode.

CT-2020's robust software features an on-orbit environment simulator, allowing the tracker to emulate mission-specific integration and operations for risk reduction. In addition, the tracker's software can be upgraded while on-orbit, allowing updates to the star catalog, spatial/intensity calibration and software algorithms.

SPECIFICATIONS

- 1.5 arcsec performance stand-alone unit
- Provides full three-axis <1.5 arcsec performance with typical two-units on a spacecraft
- Full performance with a 15 deg sun angle
- Tracks with moon in field of view
- High rate capable (up to 8 deg/sec) with reduced performance to enable track-through-slew
- 1553, RS-422 command and data interfaces, SpaceWire option
- Simultaneous attitude output and full frame image output at 10 Hz over high speed LVDS
- On-orbit upgradeable software, star catalog, algorithms and spatial re-calibration
- TEC provides efficient, stable detector temp control, on-orbit adjustable
- Hardware-in-the-loop testing with built-in focal plane simulator enables end-to-end mission simulations
- Integrated LED polarity tester
- Two modes of operation: fully autonomous or directed search
- Dimensions: 5.7" diameter x 12" tall (with standard sunshade)
- Mass: 3 kg
- Power: <8 W
- Modular options:
 - Nominal +28 V power, +120 V, +5 V options
 - 25 deg standard sunshade (15 deg available)
 - Q or V-Level parts with full EEE parts traceability
- Radiation-hardened-by-design CMOS and ASIC
- Meets all relevant MIL-STD and SMC requirements
- Complete set of documentation and analysis available with production
- Compliant with Buy American Act

HERITAGE

For more than 50 years, Ball has delivered the highest-reliability, highest-performance star trackers available to support civil, commercial and defense missions. We are leveraging this heritage to optimize the CT-2020 for cost and performance to bring a commercially-competitive, affordable, domestic star tracker solution to the U.S. market.

Ball is now accepting orders for the CT-2020.
